EPOS teams with IGEL Technology to empower collaboration and communication across organizations

October 8, 2020: The premium audio brand, EPOS – part of the Demant Group, today announces that it will team up with IGEL Technology, one of the leading international companies offering solutions for server-based computing and desktop virtualization, to ensure flawless collaboration and communication across organizations.

As working remotely is being more relevant than ever before, and more professionals use mobile devices in their day-to-day work via cloud-based services, the future of thin clients in the modern workplace is set to increase. Being highly secure and manageable due their ability to streamline hardware and run specific programs for specific tasks, thin clients are often used by larger organizations dealing with sensitive data in sectors including Banking, Finance and Insurance Service, as well as Healthcare, Government and Education. To keep up with demands within these sectors, and ensure optimal communication and collaboration among professionals, the audio brand EPOS announces its new collaboration with IGEL Technology, one of the leading international companies offering solutions for server-based computing and desktop virtualization.

Businesses leveraging Linux thin client via the IGEL OS operating system will now have the opportunity to integrate EPOS Device Management into its operating system to ensure seamless optimization and management of their EPOS audio devices. The EPOS Device Management consists of two interconnected audio device management solutions for thin clients – EPOS Connect and EPOS Manager – that are both now compatible with VDI solutions and enabling IT managers to optimize and update an organization's audio devices from a central position.

A dedicated version of the client application EPOS Connect has been integrated into IGEL OS, and once enabled via Universal Management Suite (UMS), IT managers can download and install EPOS Manager – a free cloud-based IT management tool that allows full audio device management, configuration management and firmware updates across an entire organization from a central position, thus ensuring full control.

EPOS Device Management

EPOS Connect is the client application that can be installed or integrated into the thin client. It ensures EPOS headsets and speakerphones work seamlessly with softphones and gives employees access to the latest firmware updates and personalized settings. With EPOS Connect installed at the endpoints of a VDI environment, EPOS audio devices can be managed with EPOS Manager via an intuitive user interface.

EPOS Manager is a free cloud-based IT management solution that enables IT managers to manage, update and configure settings for EPOS headsets and speakerphones connected to thin clients within an organization from any location. With EPOS Manager, IT managers can optimize business across locations with secure, analytical audio device management freeware. It ensures implementation of the latest firmware updates on the IT manager's terms, boost company performance and minimize the possibility of any downtime.

About EPOS

EPOS is an audio and video solution company developing and selling devices for business professionals and the gaming community. Based on leading and advanced technologies, the Danish founded company delivers high-end audio and video solutions with design, technology and performance as paramount parameters.

The establishment of EPOS is based on the decision to let the business segments of the joint venture – known as Sennheiser Communications – between Sennheiser Electronic GmbH & Co. KG and Demant A/S evolve in different set-ups. Alongside the introduction of a new own-branded portfolio, EPOS continues to sell the current Sennheiser Communications portfolio co-branded as EPOS | SENNHEISER.

EPOS is part of the Demant Group – a world-leading audio and hearing technology group. As such, it builds on more than 115 years of experience of working with innovation and sound. With headquarters in Copenhagen, Denmark, EPOS operates in a global market with offices and partners in more than 30 countries.

About IGEL

IGEL provides the next-gen edge OS for cloud workspaces. The company's world-leading software products include IGEL OS™, IGEL UD Pocket™ (UDP) and IGEL Universal Management Suite™ (UMS). These solutions comprise a more secure, manageable and cost-effective endpoint management and control platform across nearly any x86 device. Easily acquired via just two feature-rich software offerings, – Workspace Edition and Enterprise Management Pack – IGEL software presents outstanding value per investment.

Additionally, IGEL's German engineered endpoint solutions deliver the industry's best hardware warranty (5 years), software maintenance (3 years after end of life) and management functionality. IGEL enables enterprises to save vast amounts of money by extending the useful life of their existing endpoint devices while precisely controlling all devices running IGEL OS from a single dashboard interface. IGEL has offices worldwide and is represented by partners in over 50 countries.
